

Ford Explorer
Front Splitter
Installation Manual

First, please check that the box contains all the parts you ordered. In case of damage to the box or to the parts, please contact us as soon as possible. Carefully read the manual before installing these parts.

Apply the splitter to the bottom of the bumper and support it with improvised materials so that the splitter is pressed against the bumper.

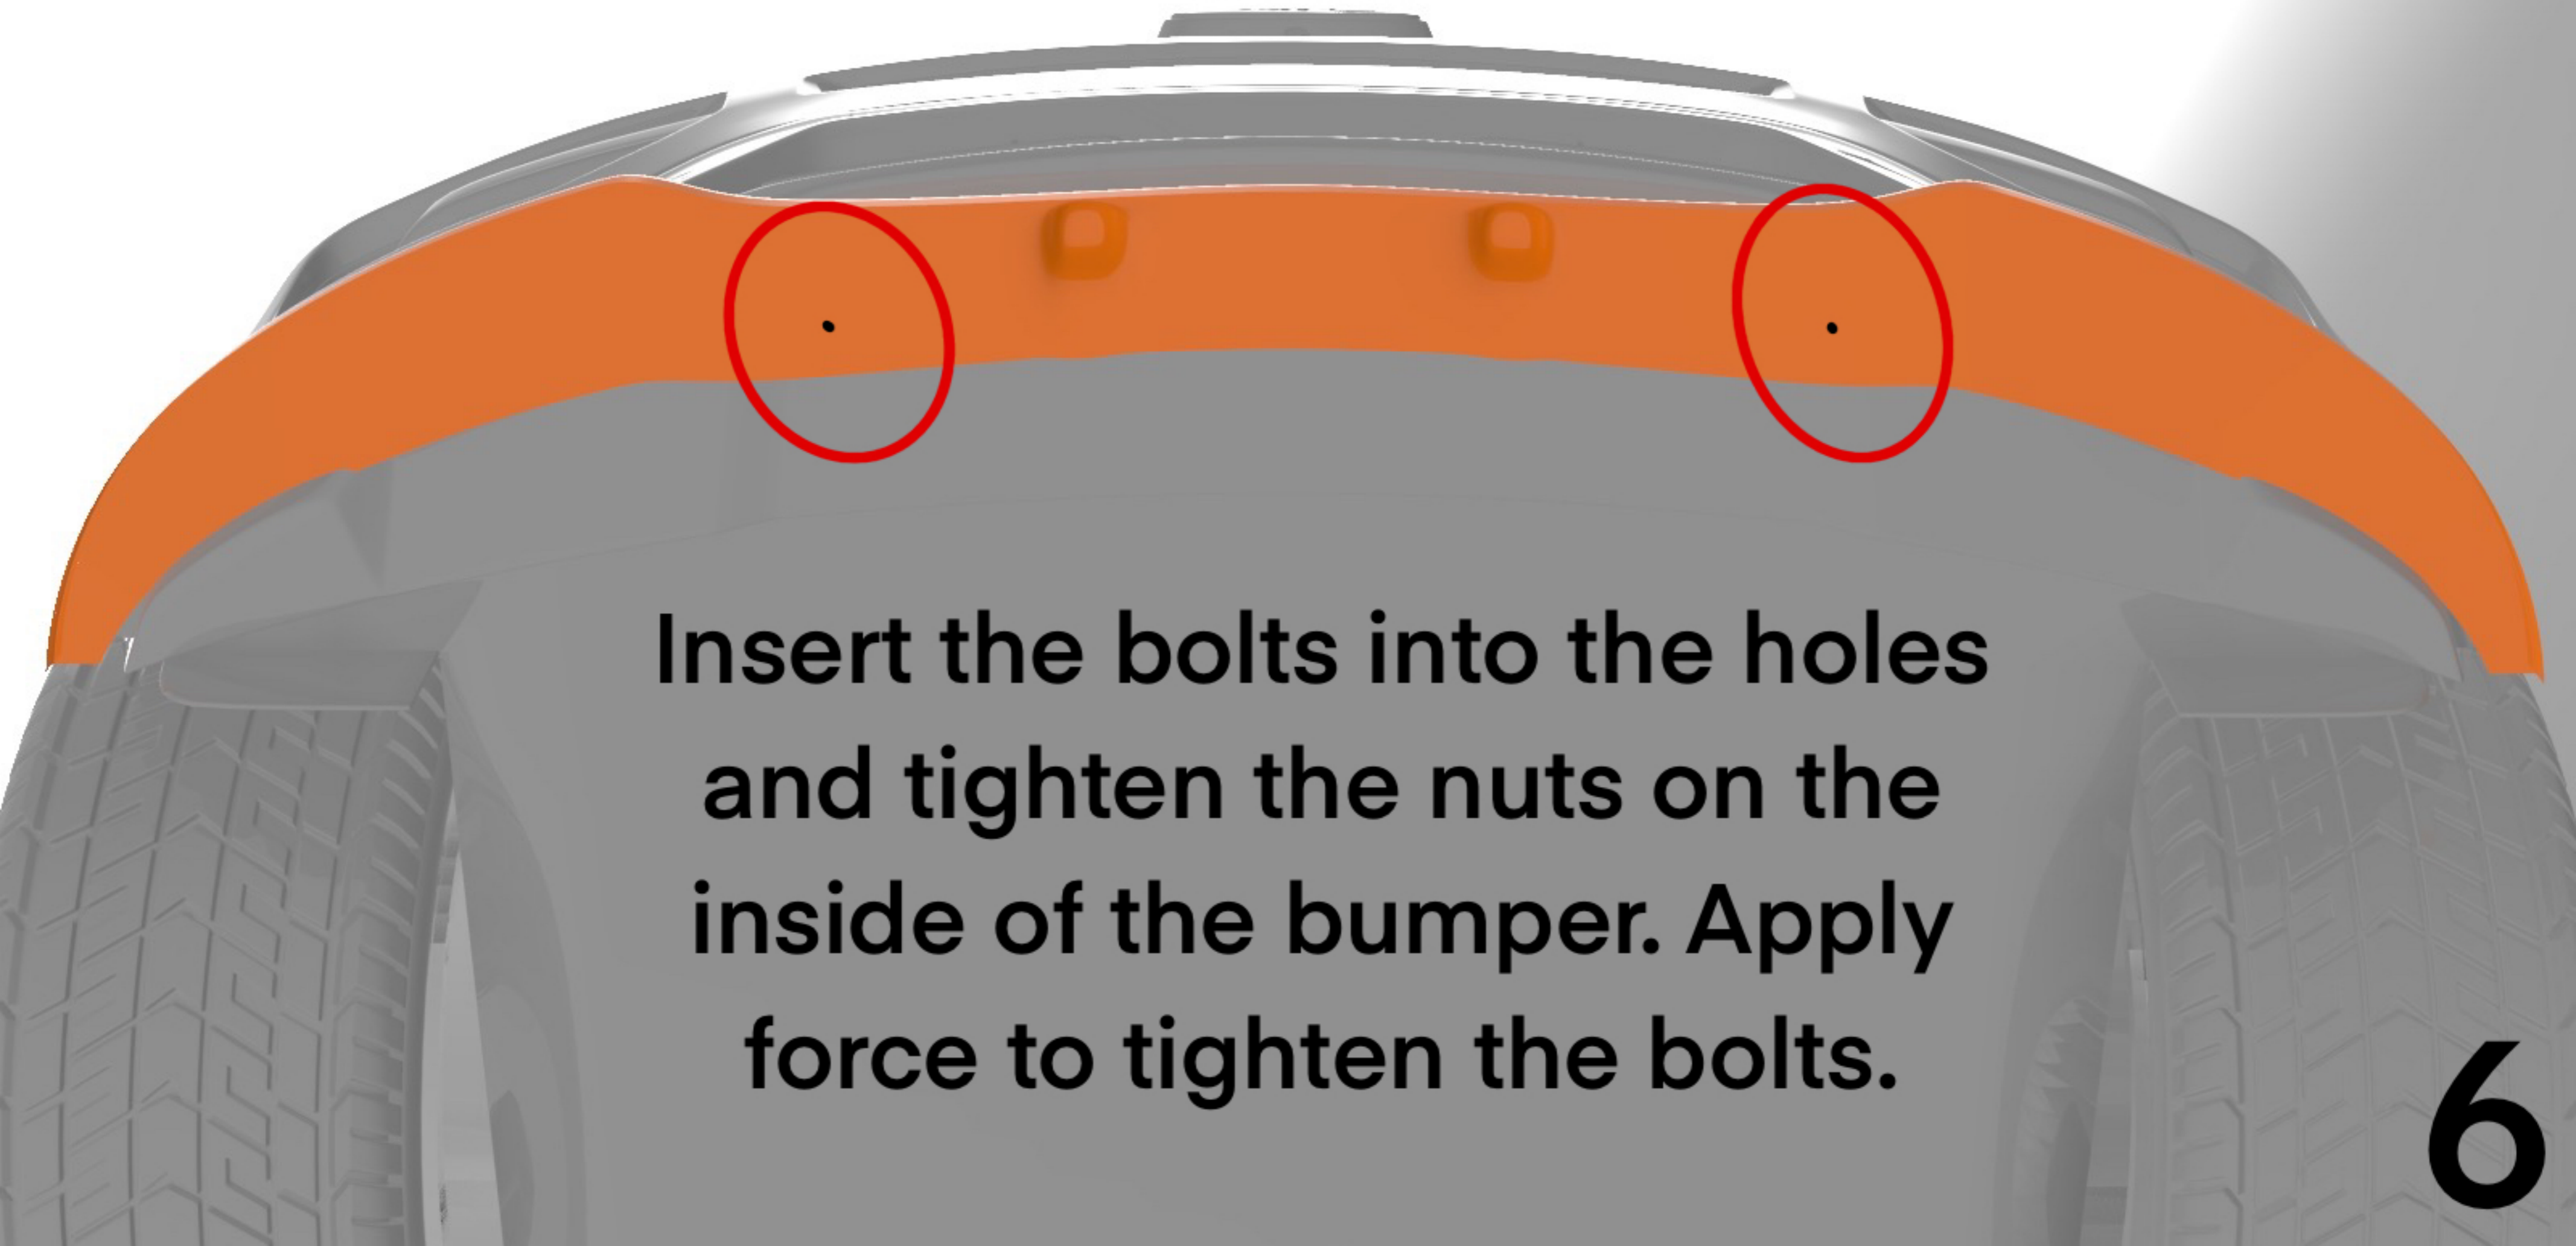

Make sure the splitter is the same on both sides of the bumper.

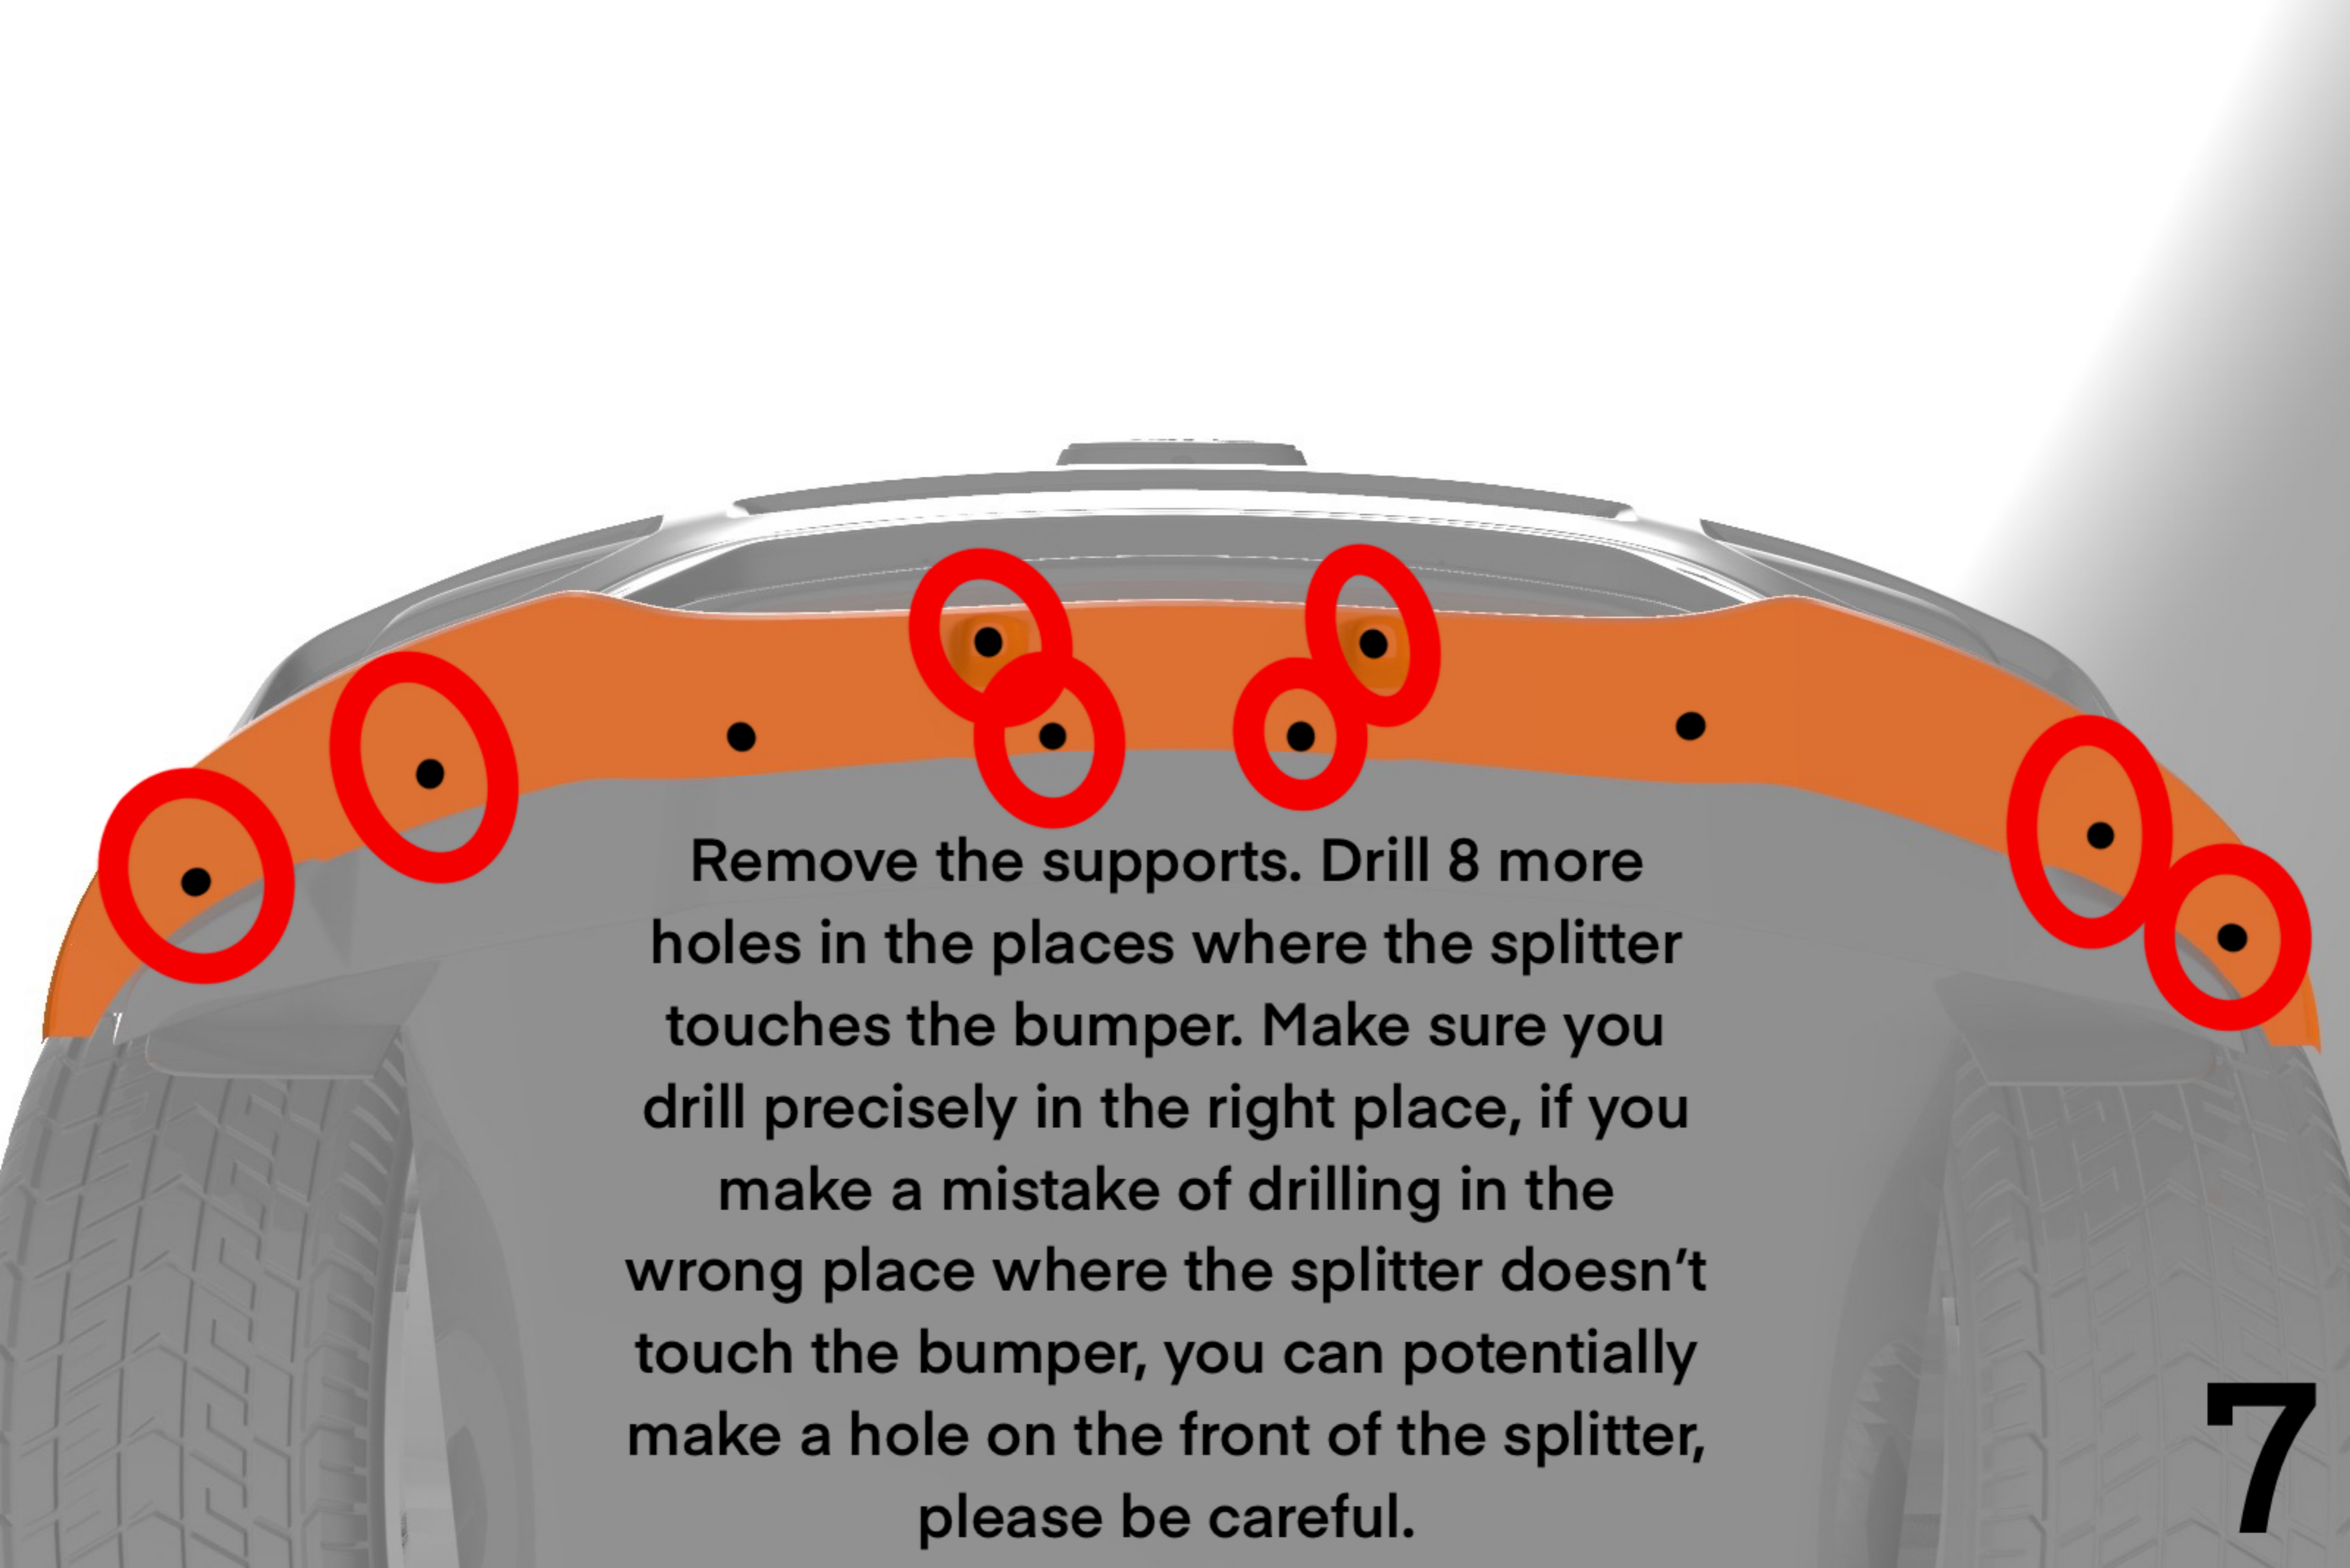

Make sure the splitter is the same on both sides of the bumper.

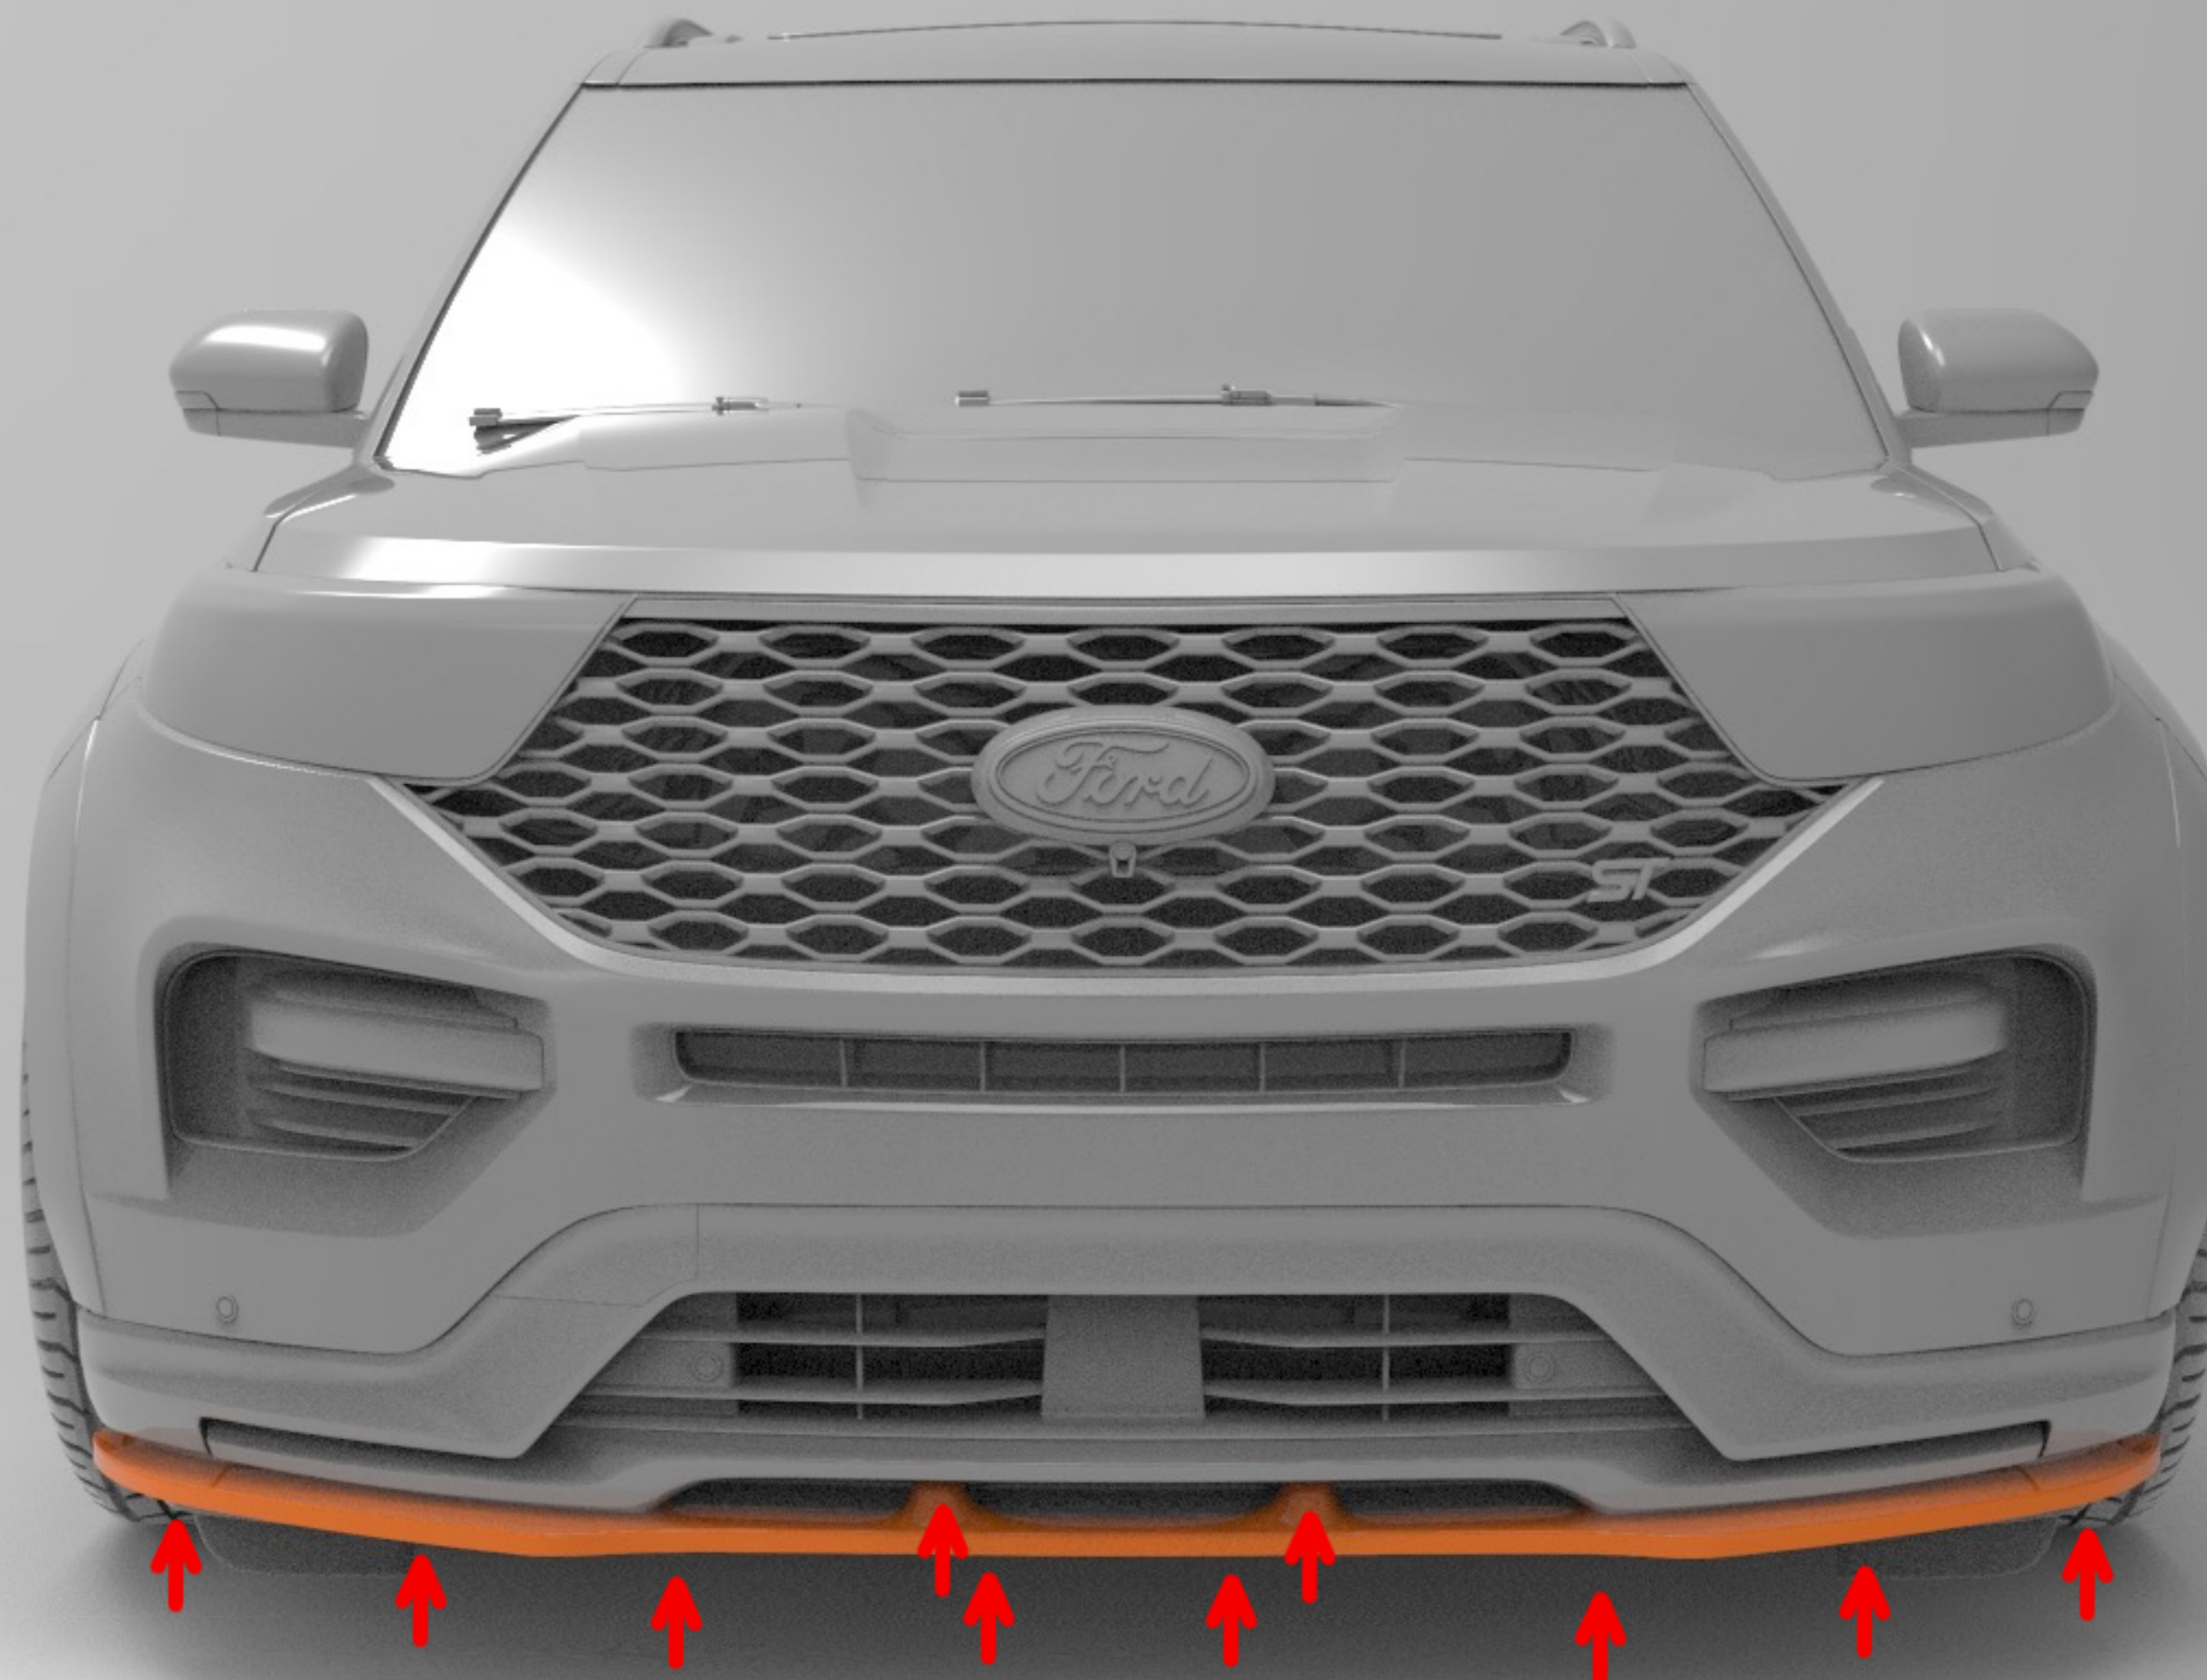

Drill two holes in the places where the splitter touches the bumper. Make sure you drill precisely in the right place. If you make a mistake of drilling in the wrong place where the splitter doesn't touch the bumper, you can end up making a hole on the front of the splitter, please be careful.

Insert the bolts into the holes and tighten the nuts on the inside of the bumper. Apply force to tighten the bolts.

Remove the supports. Drill 8 more holes in the places where the splitter touches the bumper. Make sure you drill precisely in the right place, if you make a mistake of drilling in the wrong place where the splitter doesn't touch the bumper, you can potentially make a hole on the front of the splitter, please be careful.

Insert the bolts into all the holes and tighten the nuts on the inside of the bumper. Apply force to tighten the bolts.

Enjoy!
